SPX Art

*Silhouette*

## Temple Inclination

Warm up temple carefully with an air heater for a few seconds at approx. 80°C /176°F (until you feel the tension stop).

**NOTE:** Do not overheat SPX parts or RX lens. Protect against heat with a leather cloth!

Once SPX gets soft, adjust the inclination and keep position at room temperature until temples cool down.

*Silhouette*

## Temple Curving

Curve temple ends in but do not heat or fold.
