

Silhouette Advanced Lab Training Program

Silhouette International, the leader in lightweight, iconic eyewear made in Austria, prides itself on offering outstanding products, service, training and support to the Eye Care Professional. In addition to providing technical guides and instructional videos on the Silhouette Portal, Silhouette has also provided advanced training to participating labs, led by Silhouette's resident Optician.

These advanced labs were considered eligible for the new training program based on their necessary equipment and previous performance. The Silhouette program provides training and tools that demonstrate how to work best with Silhouette's in-line grooves, precision lens cutting and the full array of Silhouette rimless and non-rimless frames. They are required to prove their competencies with the successful glazing of the range of Silhouette frames and agree to participate in on-going quality assurance monitoring from Silhouette.

While these labs are not affiliated with Silhouette, Eye Care Professionals now have the option of choosing a lab that has participated in this new comprehensive Silhouette training program.

While Silhouette will make every effort to monitor that the glazing of Silhouette frames from these labs consistently meet our highest standards, any questions on the lens finishing should be directed to the respective lab. We are committed to improving the complete quality of the product for you and your patients.

Silhouette appreciates hearing about your successes and challenges, please direct any feedback to our Ophthalmic Technical Expert: Labtech@us.silhouette.com.

We are not adding any more labs to this select group this year, if you are interested in participating please email Labtech@us.silhouette.com.

ICONIC EYEWEAR MADE IN AUSTRIA. SINCE 1964.
